

In conjunction with Oregon State University Extension office, Marist High School is now offering free water well screening for nitrate. Collect the water sample in a clean bottle or jar, and drop it off at the front office at Marist, located at 1900 Kingsley Road in Eugene.

Marist staff and students will conduct the test for educational purposes only, and will not disseminate the results to anyone except the well owner. For best results, please deliver your water well sample to Marist the same day it is taken. If you need additional information about this program, please contact Sue Yellowtail, Marist Science Lab Assistant at 541-914-5335 or syellowtail@marisths.org.
